Edutrace is a website service focused on connecting students and instructors, enabling students to improve their learning through assignments, collaboration, and task-based interaction, while allowing instructors to monitor student performance. Furthermore, EduTrace is designed to bring together real-time activity tracking, communication, and collaboration in a single platform to create a more efficient and supportive learning experience.

Technologies: Next.JS, Spring Boot, Typescript, Postgresql

Responsibilities:

- Project Lead
- Frontend Lead
- Deployment

Royal Univeristy Of Phnom Penh & Freelance Project — July 2025

Inventory Management System is a custom-built application developed for a client to streamline inventory management, product tracking, supplier management, and stock monitoring. The system is designed for internal business use and is privately hosted within the client's environment, making it inaccessible to the public**.** This system was originally developed as a freelance project for a client and was later extended and documented as my Practicum and Final Year Project at the Royal University of Phnom Penh (RUPP).

Technologies: Laravel, Filament, Inertia.JS, React, Typescript, MySQL
